Dr. Thuc Vu is the CEO and co-founder of Kambria and OhmniLabs. He previously founded Katango and Tappy which were acquired by Google and Weeby.co, respectively. Thuc has deep expertise in game theory, machine learning, tournament design and multi-agent systems. He earned his PhD from Stanford and BS from Carnegie Mellon, both in computer science. He was awarded CRA Best Undergraduate Student in North America for his research in 2004.

As a way to pay it forward, Thuc is involved in several community and non-profit projects in Vietnam. He co-founded VietSeeds and VietAI. VietSeeds is a scholarship program that helps underprivileged students to attend universities. This is the 7th year of VietSeeds and it grows to 12 core staff, 60 mentors supporting 200+ students to go to school each year. Each student will also have a mentor, and receive training and workshop programs that help them do well at school, improve their social skills and get ready for the job market. VietAI is an educational project that bring AI courses from Silicon Valley back to train engineers in Vietnam. VietAI recently opened registrations for its class, with the goal of training 100 entry-level Machine Learning engineers in Vietnam, 10% of which will be mentored further in cool research projects.

Apart from being an entrepreneur, Thuc is also a Research Scientist and Assistant Professor at John Von Neumann Institute of Vietnam National University. He is also fostering a community of AI & Robotics and helping to grow a tech ecosystem in Vietnam.

In 2017, Thuc was named as one of the "40 Under 40" of Silicon Valley by the Silicon Valley Business Journal for his tireless effort to bring about a significantly positive impact in the business world.
